Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Applicant's election with traverse of claims 1-7 and 10-19 in the reply filed on 13 July 2006 is acknowledged. The traversal is on the ground(s) that no additional burden would be placed upon the examiner to examine all claims. This is not found persuasive because the method claims as recited would require a search of bread making systems which had plural heaters and single heaters. The recitation in the preamble of plural heaters is not limiting.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 10 and 17 are rejected under 35 U.S.C. 102(e) as being anticipated by Lee.

There is disclosed in Lee an oven and heating control therefor, comprising: a plurality of heaters 520, 526, 528; a heater driving part 518 supplying power to each heater; a temperature sensor 522 detecting oven temperature; a process condition storing part 506 storing process condition data; and a controller 502 controlling the heater driving part.

In regards to the use of the device as a bread maker, there is provided no structure which would limit the claim to such use.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-7, 9-16, 18 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee in view of Hedenberg '850.

Hedenberg discloses an oven arrangement including upper and lower door heaters and upper and lower oven heaters (see fig. 10).

It would have been obvious to one skilled in the art to substitute the oven and heater arrangement disclosed in Lee with that taught in Hedenberg and provide upper and lower door heaters and upper and lower oven heaters, in order to provide a complete heating of food items within the oven.

In regards to the specific heating operations recited in the claims, such are a function of the controller and amount to an operational step of the elements and not a structural limitation.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Yoshida, Hedenberg '009 and Kim et al. are cited for their disclosure of the state of the art.
